

## Features and Benefits

Lynden Door is committed to manufacturing the highest quality door possible. This philosophy is carried through the process from purchasing components to the finished product. Listed below are just a few of the features that add real value to the customer.

- All door skins are pre-graded before manufacturing: Every type and style of door skin has its own inherent defects. Our purpose in pre-grading is to remove these defective products before they are used in the construction process and sent into the field.  
**Benefit:** This process helps toward eliminating job site visits due to face problems, and allows you to concentrate on new business.
- Wide top and bottom rails on all doors: Lynden residential doors feature wide top and bottom rails. This is a Lynden Door standard that differentiates us from the competition.  
**Benefit:** This will allow you to cut a door down by 1” on each end without jeopardizing the doors structural integrity. This will also help keep any extra cost of re-railing doors to a minimum.
- Flush hollow core doors feature more paper than most competitors.  
**Benefit:** More paper adds to the structural integrity of the door. Having a good spread of paper into the corners and tight to the stile helps reduce wavy looking faces, due to inadequate blocking.
- Two lock blocks in all book edge doors:  
**Benefit:** Provides better structural integrity and flexibility for pre-hangers.
- 3” wide particleboard lock blocks.  
**Benefit:** This width combined with a wider stile gives you full blocking for a typical 2-3/4” back set cylindrical lock.
- Birch and Red Oak four door bifolds are pre-graded before manufacturing into matching sets. When you purchase a Lynden Birch or Red Oak four door bifold, we guarantee them to be a matching set or we will take it back.  
**Benefit:** Eliminates job site visits due to poor or non-matching bifold sets.
- Molded bifolds come standard with a flush back: Because molded and flush skins are so different, they are acclimated with each other for 48 hours prior to manufacturing.  
**Benefit:** This process virtually eliminates warpage due to an unbalanced construction, yet provides a cost benefit to the customer.

In summary, Lynden Door, Inc.’s commitment to keeping all fall down in its facility and out of the field is what gives you the highest quality and the best overall value for your dollar and time. This combined with short lead times and on time deliveries is what separates Lynden Door, Inc. from its competition.
