

Pacific Collection

PREMIUM FINISHES

The Pacific Collection is a carefully composed array of seven pre-set stain colors, applied to any natural wood veneer. To illustrate the effect of each of the stain colors on light, medium and dark species, please see the following illustrations of: **Natural Birch**, **Red Oak** and **White Maple**.

The coating process produces no VOC emissions and contains no formaldehyde. This finish is non-flammable and does not influence flame spread rating or smoke density. The coating contains ultraviolet inhibitors keeping the finish “water white” (clear) while protecting veneer surfaces and slowing the natural aging of the wood. All stains are organic earthen pigments and are 100% colorfast. The Pacific Collection is also antibacterial and will not support the growth of bacteria on the surface of the door.

Pacific Collection applications include stain and transparent top coat. The finishes are applied by skilled technicians in a tightly controlled production environment and **exceed TR-6, AWI UV cured specifications, the architectural industry standard.**

Choosing one of our standard stain colors gives you the assurance of a uniform finish and reduced lead times (as compared to custom color matches.)

In addition, Lynden Door also offers an unlimited range of custom color finishes to match and complement any project. (Please submit a minimum 3" x 4" color sample for custom color matches.) Inquire for information on Lynden Door’s outstanding Ultraviolet Transparent (no stain) protective outer coatings.
