

AFRICAN MAHOGANY

STYLE: VENEER

FEATURES

African Mahogany door skins are graded according to WDMA IS-1A and AWS Custom Grade Architectural "A" grade wood veneer (minimum thickness 1/50" before sanding).

Quarter Sawn gives a narrow striped or ribbon pattern when the log is sliced into veneers.

African Mahogany veneer flitches from Lynden Door are book matched, where every other piece of veneer is turned over, so adjacent pages are opened like two adjacent pages in a book. The veneer joints match, creating a mirrored image pattern at the joint line.

Available up to 4'0" x 10'0" with bonded/sanded core assembly – 1-3/8" and 1-3/4" with option up to 2-1/2" thick.

Light sanding recommended prior to finishing.

Availability: **IN STOCK**

Contact your Lynden Door distributor to source matching frames and casing.
