

ROTARY NATURAL BIRCH

STYLE: VENEER

FEATURES

Rotary Natural Birch door skins are pre-graded prior to door construction and final shipment to minimize face defects.

Rotary cut follows the birch log's annual growth rings, providing a generally bold, random appearance.

Natural Birch veneer flitches from Lynden Door are book matched, where every other piece of veneer is turned over so adjacent pages are opened like two adjacent pages in a book. The veneer joints match, creating a mirrored image pattern at the joint line.

Available in standard 6'8", 7'0" and 8'0" passage and bifold sizes, hollow or solid core construction – 1-3/8" and 1-3/4" thick.

Light sanding recommended prior to finishing.

Availability: **IN STOCK**

Contact your Lynden Door distributor to source matching frames and casing.
